

Anass Lasry

SRE / DevOps Engineer

Paris, France | +33744409031 | anasslasrypro@gmail.com | in/anass-lasry

Profile

SRE / DevOps Engineer with experience in observability, CI/CD automation, and cloud infrastructure (AWS, Kubernetes, GCP). Having contributed to **production** environments at Tenable and Worldline, I am looking for a position to deepen my expertise in large-scale system reliability.

Experience

Worldline | Cloud & DevOps Engineer — Lille, France

Project: "Capture Developers' Metrics Usage / Cloud"

04/2025 – 09/2025

- **Mission Objective:** Standardized development workflows and improved observability by making software metrics (GitLab, SonarQube) accessible and reliable for managers within Microsoft Teams.
- **Automation & CI/CD:**
 - Developed automated ETL pipelines (Extract, Transform, Load) to collect and process CI/CD and code quality metrics from **SonarQube** and **GitLab**.
 - Containerized ETL jobs into **Docker** images and scheduled them as **CronJobs** on **OpenShift** (Kubernetes) for periodic execution.
 - Reduced reliance on manual reporting by enabling data-driven decision-making across departments.
- **Data Engineering & Optimization:**
 - Deployed a reusable **MongoDB** component using **Helm** charts in a private cloud environment for data persistence.
 - Optimized data processing, successfully handling **6 months of production data in just 5 minutes** through bulk writes and aggregation pipelines.
- **Visualization & Governance:**
 - Designed interactive **Power BI** dashboards integrated directly into **Microsoft Teams** to track task volumes, average waiting times, and execution trends.
 - Ensured full compliance with **GDPR** and internal security constraints within a private cloud architecture.

Tenable | Site Reliability Engineer — Paris, France

Project: "Monitoring and Automation of NGINX Surveillance Stack"

04/2024 – 09/2024

- **Mission Objective:** Enhanced the reliability and observability of critical surveillance stacks through proactive alerting and infrastructure automation.
- **Monitoring & Incident Response:**
 - Built comprehensive **Grafana** dashboards for **NGINX** log monitoring via **Loki**.
 - Reduced **Mean-Time-To-Awareness (MTTA)** by **15 minutes** through the definition of proactive alerts to predict and mitigate incidents.
- **Automation & Cloud Infrastructure:**
 - Automated test report generation and **Jira** updates via **Azure Pipelines**, accelerating release cycles by **30%**.
 - Reduced some product components' installation time to **1/3 of their previous duration** by automating deployment tasks.
 - Developed **Bash scripts** to automate repetitive operational tasks and integrated them within the **Microsoft Azure** cloud environment.
- **Collaboration & Impact:**
 - Worked in an **Agile** environment with weekly cycles, collaborating closely with developers and senior SREs.

- Streamlined communication by eliminating multiple redundant meetings through automated general reporting of test results.

Certifications

- **Certified Kubernetes Administrator (CKA)**
- **AWS Certified Solutions Architect – Associate (SAA-C03) — Scheduled May 2026**

Project

AutoK8S (*open-source*)

01/2026 – Present

- Building a command-line tool that creates and manages **Kubernetes clusters** in one command, on your laptop, in the cloud, or on your own servers.
- Automates the hard parts: **infrastructure setup, Kubernetes installation, upgrades, and backups.**
- Built with Go, designed to be simple to install and simple to use (autok8s init).

Skills

- **Tech:** Python, Go, Shell | AWS, GCP, Azure, Docker, Kubernetes, OpenShift, Terraform, Ansible, Helm | Prometheus, Grafana, Loki, GitLab CI/CD, Jenkins, SonarQube | MongoDB, Linux, OpenStack
- **Management :** Jira, Agile, Scrum, Kanban
- **Languages:** English (IELTS **7.5**), French (C1), Arabic (native), German (A2)

Education

IMT Atlantique (Télécom Bretagne) — MEng in Software Engineering (Double Degree)
Rennes, France

2023 - 2025

Institut National des Postes et Télécommunications — MEng in Software Engineering
Rabat, Maroc

2021 - 2024
